

Sustainability at Mondi

At Mondi, sustainability is more than just a guiding philosophy. It's core to our business and at the heart of everything we do. Our business strategy of pursuing sustainable value-accretive growth is pegged to the **Mondi Action Plan 2030** which, as our sustainability framework, sets out the actions we need to take to meet our ambitious sustainability goals by 2030. We, at Mondi, are determined to make a difference and contribute to a better world. Our track record speaks for itself:

First to offer
totally chlorine-free
(TCF) copy paper in 1989.

One of the first to offer colour laser paper and office paper from

FSC[TM] certified wood.

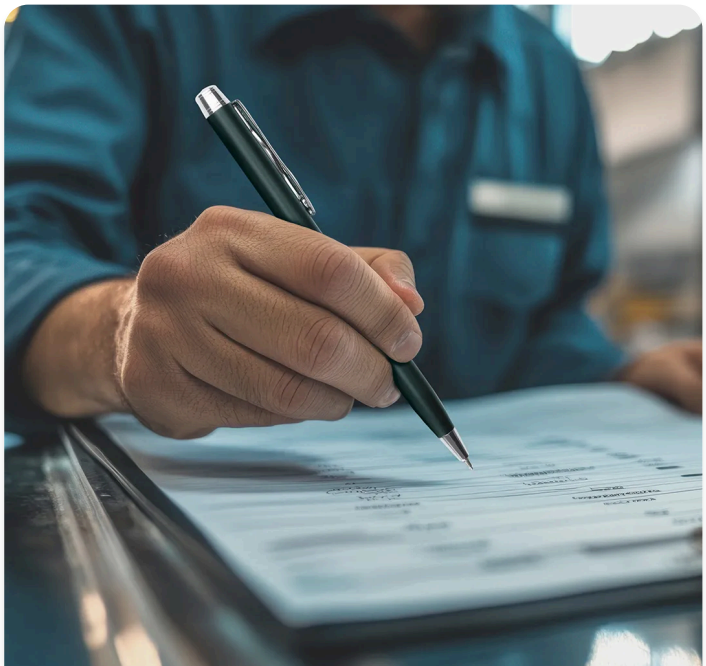

.

Long offered
fully recycled paper
with the NAUTILUS[®] brand.

Most extensive portfolio of
Cradle to Cradle Certified[®]
paper.

We place great importance on the sustainability of our paper portfolio. This can only be achieved by embedding sustainability in all our actions, across our entire supply chain, from sourcing right through to production and logistics. To support our efforts, **three sustainability pillars** form the bedrock of all actions we take.

Investing for the future

Mondi strives to produce eco-efficient papers with the greatest possible reduction of waste and environmental emissions to water and air.
Our track record demonstrates great strides in CO_2 reduction and optimisation of our production processes.
But the ambitious and industry-leading science-based targets that we have set for ourselves, as outlined in **Mondi Action Plan (MAP2030)**, are aimed at reducing GHG emissions and mitigating climate change even further.
These targets can only be achieved by **investing significantly in our operations** so as to improve energy efficiencies and resource utilisation, and to reduce waste to landfill.

Credible partner of choice

We believe that one of the ways for us to be the preferred partner for our customers, is through our credibility or trustworthiness.
Legal compliance & responsible business practices are merely our departure point.
The numerous **eco-labels and third-party certifications** that our products and our business processes have obtained validates our ambition as a company.
The **transparent measurements** we take cover the carbon footprint of all our paper mills and for each individual paper product we produce.
We do all of this, not only for the **external recognition** it bring us as a leader in the industry, but because sustainability lies at the heart of our business.
But you don't just have to take our word for it.

Education & collaboration

As part of our universal approach to sustainability, we support our customers in all areas relating to this multifaceted topic – including offering guidance through our **Sustainable paper finder** to help navigate the complexities of choosing sustainable papers. In addition, we are committed to the success of all players in our value chain as well as in our communities. This can be evidenced through our:

- **Partnerships and advocacy programmes**
- **Community projects**

Mondi Action Plan 2030

The Mondi Action Plan 2030 (MAP2030) sets out the actions we are taking as a Group to meet our ambitious 2030 sustainability goals. We believe that by focusing on circular driven solutions, created by empowered people, taking action on climate, we can have the most positive impact.

MAP2030 rests on the conviction that our actions, and those of our customers, can bring about change. It

Cradle to Cradle Certified®

Created for today, designed for a sustainable future: Mondi is proud to offer an extensive portfolio of uncoated fine papers as Cradle to Cradle Certified® at the Bronze level from its mills: Mondi Neusiedler in Austria, Mondi SCP in Slovakia, and Mondi Merebank in South Africa.

Sustainable forest management

As a business that relies on forests, zero deforestation and responsible forestry is of the highest priority to Mondi. If you're interested in learning more about sustainable forest management in Europe, the main certification schemes PEFC and FSC™ and Mondi's responsible wood sourcing approach, this is for you, but rest assured that all our papers come from certified sustainably managed forests, controlled or recycled sources, always.

Cycle of sustainability

The ability to create high-quality paper from a waste product means making the most of the resources we have. However, paper cannot be **recycled** indefinitely. After around 4-6 lifecycles, the fibre is no longer suitable for recycling. So even with the most thorough post-consumer collection of recovered paper, we would run out of usable paper to recycle. This is why we produce many of our brands with fresh fibre. However, our European mills only utilise pulp from **sustainably managed forests**, controlled or recycled sources, some of which are managed directly by Mondi. Thus, unlike traditional producers of recycled paper, Mondi covers every aspect of the cycle of sustainability
